

# Lucas Augusto Kepler

Panambi-RS, Brazil • keplerlucas7@gmail.com • linkedin.com/in/lucas-kepler • github.com/ScryLk • lucaskepler.space

## Summary

Full-stack developer focused on AI agents and LLM-powered automation. I build and operate AI agents with OpenClaw, design LLM pipelines on Gemini (real-time transcription, transcript analysis, retrieval), and ship full-stack products in React, Node.js, and TypeScript. Comfortable owning AI architecture decisions in small teams and working independently. Available for daytime overlap with the Americas (GMT-3) and weekly voice/video syncs.

## Skills

- **AI & LLM:** AI agent development with OpenClaw; Gemini 2.5 Flash; LLM pipelines (real-time transcription, transcript analysis, objection/entity extraction); retrieval / RAG (Algolia Agent Studio); prompt engineering.
- **Full-Stack:** React, Next.js, TypeScript, JavaScript, Node.js (Fastify), HTML5, CSS3, Tailwind, Bootstrap.
- **Integrations & Automation:** REST APIs, WebSockets, Slack / Discord / WhatsApp / Telegram app integrations, n8n (workflow automation, Make.com equivalent), webhooks, multiple live API data sources.
- **Other Backend:** Java (Spring Boot, JDBC), Python (Django, Pandas), DDD, MVC.
- **Data & Infra:** PostgreSQL, Redis, SQL, Git, GitHub, Docker, Linux.
- **Languages:** Portuguese (Native), English (Intermediate).

## Projects

### Teki — AI IT-Support Agent

[github.com/ScryLk](https://github.com/ScryLk)

- Built an AI support agent on OpenClaw and Gemini 2.5 Flash, integrated across Slack, Discord, WhatsApp, Telegram, and Teams as external channels.
- Implemented a real-time call transcription pipeline (Gemini Live API over WebSocket + Web Audio API) feeding LLM analysis of live conversations.
- Connected and maintained multiple live API data sources with a real-time connection monitor; added an API-key system with Redis rate limiting and HMAC/JWT authentication.
- Stack: Next.js, React, TypeScript, Node.js, Electron, Tailwind.

### Workflow Automation (n8n)

- Designed and maintained automation workflows orchestrating content and integration pipelines across external APIs (Make.com-equivalent platform), running on self-hosted Docker.

## Experience

### Mérito Engenharia de Software

Ijuí-RS, Brazil

*Data Analyst / Developer*

12/2025 – 03/2026

- Built corporate solutions in Java (DDD), integrating the persistence layer with PostgreSQL via JDBC.
- Organized, processed, and validated data for integration with corporate systems.

### Panambi City Hall

Panambi-RS, Brazil

*Information Technology Intern*

06/2024 – 11/2024

- Delivered system integrations now managing 600+ municipal IT assets and a fleet solution with 1,000+ recorded trips.
- Created the "Bolsa Família" pre-registration system, featured in local media for eliminating physical queues and improving citizen access.
- Implemented a centralized helpdesk unifying support for the Panambi Health Hub; handled infrastructure, support, and networking.

### Fockink

Panambi-RS, Brazil

*Information Technology Intern*

01/2022 – 09/2023

- Member of the IoT Portal project, performing Quality Assurance (QA) and UI Design; supported IT infrastructure in an industrial environment.

## Education

### Federal Institute Farroupilha (IFFar)

Panambi-RS, Brazil

*Associate Degree in Systems for the Internet*

01/2022 – Present
